

Reason, Theology, and the Genome

A Conference on the Ethics of Human Enhancement

9 October 2010
University of Oxford

What is the place of theology in the debate over genetic engineering and human enhancement?

Are theological reasons of interest only to believers? Or, as Michael Sandel and Jürgen Habermas have both suggested, might they be important for society generally, for secular and religious alike? **Reason, Theology and the Genome** brings together a distinguished international panel of speakers, representing many different disciplines and points of view, to consider the relevance of theology to one of the most important ethical questions of our time.

Panel 1: The Science of Enhancement
Panel 3: The Liberal Eugenics

Panel 2: The Ethics of Enhancement
Round-Table: Theology in the Public Arena

Speakers: **John Harris** (Manchester), **Paul Griffiths** (Sydney & Exeter), **Nigel Biggar** (Oxford), **Anja Karnein & Mattias Iser** (Frankfurt), **Robert Song** (Durham), **Guy Kahane** (Uehiro Centre), **Guy Brown** (Cambridge), **Michael Hauskeller** (Exeter).

Cost is £35 (students £20); includes lunch. Registration closes 30 September.

Visit www.mcdonaldcentre.org.uk for full details and registration.
